### China's problems

China has one of the fastest growing HIV epidemics in the world with 10 million to 20 million by 2010

140,000 children have lost one or both parents to AIDS-related illnesses

China has 16 of the world's 20 most polluted cities

Over 70% of China's rivers are too polluted to drink from.

NGOs struggle to gain enough resources to grow their social impact.

While many multi-national companies have a large CSR budget but can't find suitable social projects to invest in.

With 1.3 billion people these problems become even harder to solve.
